

## Energy Management and Building Science Essentials of Facility Management (EOFM) Program

**Henry Bleisch**

Henry earned a paid Facility Management Internship at Western Allied Mechanical onsite at NXP Semiconductor

**Paid Intern**      POSITION - Facility Manager

*By experiencing the daily activities of a Facility Manager, I learned how many things FMs are exposed to and responsible for each day. The FM role requires attention to detail, effective communication and leadership.*

*It is amazing how much we learned in our various Energy Management classes that I experienced first-hand during my internship*

*The Essentials of Facility Management experience was a great learning opportunity for me and I am grateful that it led to an internship that really opened my eyes and showed me what a great career path FM is. I am very interested in pursuing FM as my career of choice.*

The Essentials of Facility Management (EOFM) is an introductory course.

Program Opportunities Include:

Class Room Instruction, Facility Tours, IFMA Networking, 3 Credits,  
Possible Internships and Job Placement
