

- **Question:** What Causes Global Warming?
- **Answer:** Scientists have determined that a number of human activities are contributing to global warming by adding excessive amounts of greenhouse gases to the atmosphere. Greenhouse gases such as carbon dioxide accumulate in the atmosphere and trap heat that normally would exit into outer space.

Your assignment: What are the ramifications of global warming on the process of photosynthesis? How does that affect the process of photosynthesis? Write $\frac{1}{2}$ - $\frac{3}{4}$ (double spaced) of a page answer that expresses your opinions using what you know about the process of photosynthesis discussed in this chapter.
