

# Sign up---Endangered animal groups

# Issues effecting Species

- habitat loss fragmentation/Deforestation
- Pesticides/pollution
- Poaching and Illegal wildlife trade-  
economically valuable
- Negative public image/predator  
eradication programs
- Climate change

# Important Characteristics

- **Range:**  
size, habitat, geographic location  
proximity to development etc.
- **Reproductive requirements:**  
parental investment, # of young, average life span, age of maturity, length of gestation period
- **Behavior:**  
secretive? Gregarious? Migration?
- **Food :**  
limited? Carnivore or herbivore?
- **Position in food chain:**  
apex predator? Keystone species? Herbivore? Carnivore? omnivore

# Nepal's success

# Nepal--tigers, rhinos and elephants

- No poaching for 365 days straight 2011 and 2014 – 2016 (2 years)
- Highest levels of government are committed— cooperation with India and China
- Supported by World Wildlife Fund
- 10 national parks 3 reserves 6 conservation areas --- 23% of country
- 16 districts handed over 1/3 of countries forest to local communities to manage
- Community-based anti-poaching units
- Educating and empowering the youth of the villages to influence the community as stewards of the forest— eco club
- Use of Nepalese celebrities as spokes people

# 1. thylacine

## Important characteristics:

- shy-unable to breed in captivity, little was known
- solitary predators, nocturnal
- low birth rate and limited lifespan
- opportunistic carnivore- sheep

## Reasons for extinction:

- livestock predation  
extermination program
- Very little known about its natural history/behavior
- reputation as bloodthirsty killers.

## Recommendations:

- Extensive **field** research
- media campaign/ re-education program-- ecology
- political protest to stop extermination program
- preservation of habitat  
Possible relocation?
- predator/ prey fund
- guard dogs for livestock
