

ECG Take-Home Quiz #3

EACH QUESTION IS WORTH ONE POINT. Please print and complete this quiz, and turn it in on the assigned date.

1. A heart rate over 100 beats per minute is termed _____.
2. A heart rate under 60 beats per minute is termed _____.
3. If the distance between R waves is unequal, the rhythm is described as _____.
4. There are _____ large boxes in a six second strip.
5. Ten of the six second strips equals one _____ (an interval of time) recorded on the ECG.
6. If you count the number of P waves in a six second strip and multiply it by _____, you will be recording the _____ rate.
7. To determine the ventricular rate using the "sequence method," the 3 lines following the line where the R wave falls are counted using the number sequence "_____, _____, _____" in succession.
8. The method to determine heart rate described in question #7 can only be used if the rhythm is _____.
9. _____ is the term used to ensure comparison from one ECG machine to another.
10. Muscle artifact can be caused by _____, _____, or _____.
