

De Anza Nursing School Immunization Worksheet

NEW STUDENT REQUIREMENTS: Documentation is due the first day of school, after the Student Assembly, and MUST INCLUDE COPIES OF: Official Lab forms or immunization/vaccine cards/forms with agency stamp or logo present. DO NOT DELAY in completing these shots/tests.

Positive titers (lab work from drawn blood showing immunity to a disease) are required for MMR, Varicella and Hepatitis B. Proof of being injected with the vaccine alone is not sufficient. We do not expect you to have completed the Hepatitis series before the start of Q1 clinical, but we do expect a titer after completion to see if you actually acquired immunity. If you have had these vaccinations in the past, or had some of these diseases previously, get the titers first, as soon as possible, to see if you are immune. If a titer shows that you are immune, then you do not need the corresponding vaccination series. Please consult with your health care provider about your particular situation regarding vaccinations. Pregnant women or people with compromised health, for instance, should consult with their provider before getting immunizations. If there is a problem, please contact the Nursing School. Please complete titers as soon as possible after the vaccinations are done, but **at least 6 weeks** after the last vaccination of a series, so that if the results are negative (i.e., you are not immune), you can be re-vaccinated. We want you to gain immunity as soon as possible.

De Anza's Health Services offers separate titers for MMR, Varicella & Hepatitis B. Combined cost for all is approximately \$45.

Please check Student Health Services' web site for hours, location and contact information: www.deanza.edu/healthservices

**MMR and Varicella vaccinations should be given no less than 4 weeks prior to TB testing (PPD test).*

**MMR and Varicella vaccinations should be administered at the same time, if both are needed.*

1. **Measles, Mumps, Rubella (2 injections given 1 month apart)** *Injection cost: \$20 each @ De Anza College Health Services*

- Blood draw for titer (antibody check) First: _____ (result/date)
- First Injection (if negative titer) _____ (date)
- Second Injection _____ (date)
- Blood draw for titer (antibody check) Follow-up: _____ (result/date)

2. **Varicella (chicken pox) (2 injections given 1 month apart)** *Injection cost: \$90 @ Health Services*

- Blood draw for titer (antibody check) First: _____ (result/date)
- First Injection (if negative titer) _____ (date)
- Second Injection _____ (date)
- Blood draw for titer (antibody check) Follow-up: _____ (result/date)

3. **Hepatitis B (3 injections over 6 months)** *Injection cost: \$40 each @ Health Services*

Hepatitis B can be done any time in relation to TB testing.

- Blood draw for titer (antibody check) First: _____ (result/date)
- First Injection (if negative titer) _____ (date)
- Second Injection (1 mo. after 1st) _____ (date)
- Third Injection (4 mo. after 2nd) _____ (date)
- Blood draw for titer (antibody check) Follow-up: _____ (result/date)

4. **Tetanus, Diphtheria, acellular Pertussis* (TdaP) or Td**

Injection cost: \$20 each @ Health Services

** Due to increase in cases of pertussis occurring in the community*

***TdaP can be done any time in relation to TB testing. (Required every 5 years)**

Date of last _____ (date)

5. **Tuberculosis test (The new QFT-G blood test or older 2-Step PPD test - 2 injections, 1 week apart, read at 48-72 hours after each injection)**

PPD tests are Free @ Student Health Services – PLEASE CALL AHEAD (408 864-8732) TO SCHEDULE A TWO-STEP SERIES

We will accept a negative result of the QFT-G (QuantiFERON® - TB Gold Test) offered by some providers (not Health services) as equivalent to a negative 2-Step PPD. If a positive result occurs, you will need to perform additional testing as described below for a positive PPD.

TB tests must be done within 30 days of start of quarter and the 2-Step PPD at least 4 weeks after MMR and Varicella have been administered, so you have two possible strategies regarding PPD testing:

1. Do TB testing last after immunizations have been completed. OR
2. Do 2-step TB testing prior to or one month after the **first** MMR/ Varicella injection is completed, and have your second MMR/Varicella vaccination after the TB tests are completed.

2-Step test results: _____ (result/date) _____ (result/date)

OR
Get a chest x-ray within 8 weeks of start of quarter (**NOT** earlier), **only if** your first PPD test is positive or if you have been previously positive and you do not have an X-Ray (within the last 5 years) showing no signs of TB. Date of X-Ray _____

OR
If you were previously positive and have proof of a clear X-Ray (within the last 5 years), go to Student Health Services and get a Surveillance Form to complete and submit with your other health documents. You need to show them proof of clean X-Ray.

Date of X-Ray _____ **Surveillance Form** filled out: YES NO
