

How To Organize Your Remediation Content

- You should start by reviewing your areas of weakness as identified on your View Results page in HESI Student Access or their individual student report. Once an area of weakness is identified, you can filter your remediation by the content type (book text, multimedia, case studies, and practice questions) that best supports your learning style.
- After viewing a remediation content item the first time, the far right column titled 'Status' will alert you that the content has been 'Viewed'; conversely, unviewed content is marked 'Not Viewed'. This will allow you to quickly determine what you have and have not viewed in remediation.
- The Study Packet folder feature can be used as a tool to *organize* your remediation items, as it allows you to store items that you feel need to be reviewed again.
