

## For PHYS 2A: General Introductory Physics

SPRING 2023

Professor	Class Time	Contact	Office Hour
Zuleyha Yuksek, PhD	<b>M - Th</b> : 9:30 am - 10:20 am <b>Location:</b> S34, <b>in-person</b>	<a href="mailto:yuksezkuleyha@fhda.edu">yuksezkuleyha@fhda.edu</a> (408) 864-8668 S Quad, S11a	In Person, S11a M&W 11:00 am - 1:00 pm

**Course website** Canvas through your De Anza portal (<https://deanza.instructure.com/>)

**Final Exam** **Tuesday, June 27 from 9:15 AM to 11:15 AM**

***NOTE:** Last day to drop a class with a "W" is June 2. If you do not drop by this date, you will get a grade according to your performance in this class at the end of the quarter.*

### Lab Sections

Professor	Class Section (all in S11)	Contact Details
Eduardo Luna	T: 10:30 am - 1:20 pm Location : S17	<a href="mailto:lunaeduardo@fhda.edu">lunaeduardo@fhda.edu</a> , S55a Phone: (408) 864 8666
Zuleyha Yuksek	Th: 10:30 am - 1:20 pm Location : S17	<a href="mailto:yuksezkuleyha@fhda.edu">yuksezkuleyha@fhda.edu</a> , S11a Phone: (408) 864 8668

### Description

The general introductory physics sequence provides an algebra-based introduction with some calculus to the basic concepts of physics that form the foundation of all the natural sciences. The first quarter introduces classical mechanics, which is the application of the fundamental laws of Newtonian mechanics to a variety of simple systems. It also includes the study of oscillations, waves, and sound. This course is a rigorous introduction to the physical laws that describe and explain the motion of bodies. It also requires problem solving using verbal logic, critical analysis, and mathematical models. Students investigate general scientific procedures as a quantitative interplay between experimentation and theory employing statistical methods, graphical techniques, and measurement theory.

The topics we will cover this quarter include: kinematics; uniform and non-uniform circular motion; linear and rotational dynamics (i.e Newton's Laws); linear and angular momentum; conservation of momentum and energy; work; Newton's Law of Gravity, oscillations, waves and sound.

In the laboratory, explore experimental scientific procedures by comparing theoretical models to classic experiments using standard measurement techniques, basic uncertainty analysis, and graphical interpretations of data.

## Prerequisites

MATH 1A or MATH 1AH (may be taken concurrently).

Advisory: EWRT 211 and READ 211, or ESL 272 and 273; PHYS 50.

## Required / Recommended Materials

- The textbook for this course is *Fundamentals of PHYSICS* by Halliday, Resnick and Jearl Walker, 12th Edition with WileyPLUS single-semester Access code, ISBN#9781119798590  
It will give you access to eTextbook!

OR

- The textbook for this course is *Fundamentals of PHYSICS* by Halliday, Resnick and Jearl Walker, 12th Edition with WileyPLUS single-semester Access code + Loose Leaf Print, ISBN# 9781119773504  
It will give you access to eTextbook and Loose Leaf Print!
- The homework system for the course is WileyPLUS. You will purchase the access to WileyPLUS when you open the Wiley Course Resources on Canvas or your first assignment with WileyPLUS.
  - The cost of WileyPLUS is ----- for the quarter.
- You will need a reliable scientific calculator, like a TI-83. We will not do any programming with the calculator, so even a less complex version will suffice.

## Course-Level Learning Goals

After completing this course each student will:

- Understand the fundamental concepts and theories of physics and become familiar with its historical development.
- Develop strong analytical skills and facility with mathematical modeling, including learning to use computers to analyze and visualize data.

## Related Learning Goals

Together with the other courses in the physics curriculum students will:

- Learn to clearly express scientific ideas using oral, visual, and written communication.
- Develop an understanding of the scientific method and build the critical thinking skills necessary to raise questions and define and solve problems.
- Develop a thorough understanding of the laws of physics and their applications.
- Become capable of performing physics experiments, including becoming proficient at analyzing and presenting the data and results.

## Teaching Philosophy

I will use a combination of mini-lectures and collaborative learning activities in pairs and groups (in-class discussion, problem solving, etc.) to help you learn the material. My role will be to facilitate your learning through discussion and in-class activities, not to have you copy down everything I say or write. The flip-side is that you have to come to class prepared, ready to discuss the material, and to participate!

## Course Format

In-class - You will come to class by reading and completing reading quizzes for each chapter. There will be a mini-lecture to introduce the topic at the beginning of class. Throughout the class, you will answer Think/Pair/Share questions, then do problem-solving in pairs. You are highly encouraged to meet outside of class with your friends to work on homework assignments by Zoom or by Canvas-Group features (Conference).

Asynchronous Work - You are expected to complete reading, reading quizzes and homework assignments outside of class time.

You are expected to:

1. Pre-class assignment
  - complete reading assignments through your book.
  - complete a reading quiz on a reading assignment.
2. Complete HW assignments.

You are encouraged to work collaboratively with your friends on the homework assignments, but any submitted assignment must be your own.

Office Hours: - I will be offering office hours in person, however I will also accommodate if you need online office hours on zoom. You need to let me know in advance, so I can make it according to my availability. The zoom link will be provided once you request it.

## Grading Policy

NO CURVE! Your final letter grade will be determined by dividing the total number of points earned (including extra credit) by the total number of possible points (excluding extra credit), multiplying by 100, and consulting the following table:

Letter Grade	Percent Points	Letter Grade	Percent Points	Letter Grade	Percent Points
A	93.0-100.0	A-	90.0-92.9	B+	87.0-89.9
B	83.0-86.9	B-	80.0-82.9	C+	77.0-79.9
C	73.0-76.9	C-	70.0-72.9	D+	67.0-69.9
D	63.0-66.9	D-	60.0-62.9	F	0-59.9

Your grade will be based on five major components, discussed in detail below, with the following relative weights:

<b>Component</b>	<b>Weight</b>
Reading Assignments	10%
Homework & Activities	20%
2 Midterms	30% (15% each)
Lab	15%
Cumulative Final Exam	25%
Extra Credits	5%

- **Lab:** The labs are an important component of this class; they will give you hands-on experience with designing and executing experiments, and the material covered during the lab complements what we do in class. **Remember: You must complete every lab in order to pass the lab class, and you must pass the lab in order to pass this course!**
- **Reading:** You will need to complete a reading assignment before we start each chapter. All the assignments will be linked from within Canvas. *The lowest grade of the reading assignments will be dropped in your total.*
- **Online Homework:** Homework assignments will be through WileyPLUS approximately per week due every Sunday at 11:59pm.; however it might change with respect to the assignment. So, check the canvas for each homework deadline. The assignments will be linked from within Canvas. Instructions for registering WileyPLUS are provided below. You are encouraged to work together on the homework assignments; however, each student must do her/his own work and be able to solve each problem independently. *The lowest grade of the homework will be dropped in your total.*
- **Exams:** Over the course of the quarter, there will be two Midterms. Review materials and more details will be provided closer to the time of the exam. This category counts for 30% of the overall course grade. *The Midterm cannot be missed or made up.*
- **Final Exam:** The final exam will be a 2-hour, cumulative, closed-book/closed- notes exam. *The final exam cannot be missed or made up.*
- **Extra Credit Opportunity:** Throughout the quarter, there will be different extra credit opportunities. They might be some of the class assignments, attendance, or some quizzes and more. **They are OPTIONAL.** At the end of the quarter, %5 of this part will be added on your total as BONUS POINTS!!!!
- **Policy on Late Work :** Homework assignments will be accepted after the due date, but the maximum grade will be reduced by 5% per day. All other assignments must be completed on time - no late work will be accepted.

## Registration Instructions for WileyPLUS

From inside of Canvas, go to “Wiley Course Resources” on the left navigation menu and open it. This action brings you directly to the Wiley resources page to make the purchase. There will be multiple options to buy, choose which one you want and pay for it. This automatically registers you in Wiley resources, so Canvas will be your primary springboard for accessing our system for the quarter.

### Check-out:

- You will not be able to do your assignments until you complete the payment process.
- You will need to click on the check box to confirm that you are purchasing access for the class listed.

For detailed instructions steps, please click [here](#).

Please also watch the “[First Day of Class video](#)” covering registration steps and purchase options.

## Policies to Minimize the Spread of COVID-19

Face masks: Properly worn face masks are strongly recommended on campus – that means covering your mouth AND nose – and may be required in some offices or by individual instructors in their classrooms, under the policy announced on Sept. 23, 2022, by the Foothill-De Anza Community College District. See the [Face Mask Information webpage](#) for more information.

Cleaning: College Operations is providing the following for all classrooms used this fall:

- Face masks
- Hand sanitizer
- Sanitizing wipes

We request that you use available cleaning products to wipe down your desks or work areas when you arrive in class. Classrooms will be thoroughly cleaned and sanitized at least once daily as well.

Symptoms and Quarantining: If you have any symptoms of illness, especially those associated with COVID-19, you must not attend class under any circumstances. As with any absence, you should contact your instructor to discuss missed lectures and assignments. If your instructor is quarantined due to COVID-19 exposure, the class will be offered remotely until the instructor is able to return to campus. Additionally, instructors may move the class to remote instruction if they feel in-person meetings are not safe.

Attendance: To prevent the spread of COVID-19, if you have symptoms or have been exposed to the virus you are required to self-quarantine and report according to De Anza’s health policy. If you have symptoms or believe you were exposed to the virus, you should not attend class in-person and notify your instructor. You should use the [Student Self-Report Form](#) to notify the college Health Services office.

If someone in an on-campus class **tests positive for COVID-19**, the other students and instructor can continue coming to class – **provided they have received a COVID-19 booster** – but **must be tested**

**after five days.** Anyone in the class who has not received a booster (but is eligible for one) will be required to stay home for five days and then be tested. (See COVID-19 [testing and isolation protocols](#).)

## **My Expectations**

I expect you to come to each class prepared, ready to discuss the material, and to be active participants in all discussions and group-based activities. In particular:

- 1- Attendance is required — During class time, we will complete activities and practice problems that will reinforce the concepts that we are covering. Please don't come to class if you don't feel well but do let me know.
- 2- Be respectful—Please treat everybody as you would like to be treated. That includes respecting differences of opinion, listening attentively while others are speaking, and ensuring no discourteous interruptions or distractions (cell phones should be silenced, no texting, no browsing the web, etc.). Any disruptive behavior during class will not be tolerated. If there is disruptive behavior during the class, the student will be given a warning. If the problem persists, then the student is asked to leave the class and a disciplinary report may be in progress.
- 3- Time management —
  - a. Reading should take 2–4 hours per week. Be sure to read the text before class, take notes and work through examples, and complete the Online Reading Assignments!
  - b. Homework should take 3–5 hours per week. Be sure to start your homework early and get help if you need it from your instructors, other students, and the physics tutors.
  - c. Quiz Preparation should take 1 – 2 hours per week. If you are completing the assigned reading, applying yourself in class and lab, and completing your homework conscientiously, you won't need to put much time into preparing for the quiz.
  - d. Completing the quiz should take 1-2 hours to complete, depending on whether you use all the available attempts.

## **Additional Policies & Information**

- 1- Academic Integrity: Each student will be held to a high standard of academic integrity. Cheating (copying) on the homework, exams, or any other assignments will result in a zero for the assignment and may also cause you to fail the class. Keep in mind: if you feel overwhelmed by the material and assignments, or simply need additional help, come to my office hours, attend recitations and group tutoring, or get in touch with me as soon as possible.
- 2- Accommodations Policy: In compliance with the Americans with Disabilities Act and with Section 504 of the Rehabilitation Act, De Anza College is committed to ensuring educational access and accommodations for all its registered students. I request that any student with a documented disability needing academic adjustments or accommodations speak with me during the first two weeks of class. All discussions will remain confidential. Students with disabilities should also contact the [De Anza College Disability Services Office](#).
- 3- Inclusive Classroom: In this community, diversity is an invitation to celebrate the uniqueness of each individual, as well as the cultural differences that enrich us all. In this course, I will do my

best to ensure that students from all backgrounds and perspectives will be served equitably. The diversity that students bring to this class will be viewed as a resource, strength and benefit. It is my intent to present materials and activities that are respectful and inclusive of the many identities of students in terms of gender, sexual orientation, disability, age, socioeconomic status, ethnicity, race, culture, perspective, and other background characteristics. Your suggestions about how to improve the value of diversity and inclusiveness in this course are encouraged and appreciated.

- 4- Reporting a Bias Incident or Sexual Misconduct: In any case of possible bias or sexual misconduct, either in the classroom or anywhere on campus, you are encouraged to file a complaint. You should use the online form [here](#). Any De Anza community member, who experiences or observes an incident of bias or misconduct, including faculty, staff and students, can file a report through this system. More information and resources around procedures dealing with sexual misconduct and discrimination and harassment are available [here](#).
- 5- Emergency preparedness: In the event of a campus-wide emergency or College Closure (e.g., storm day), continue with readings and assignments according to the course schedule and as posted on Canvas. Online office hours will be established. Information regarding the status of the Colleges status and reopening schedule may be monitored on the De Anza College home page.

### Course Schedule & List of Topics

Below is the *tentative* schedule of topics for the course. Please refer to the canvas page for the most up-to-date schedule, reading and homework assignments, and other deadlines.

Chapter	Topic	Time (weeks)
Ch 1	Physics and Measurement	0.25
Ch 2	Kinematics in 1D	0.5
Ch 3	Vectors	0.5
Ch 4	Kinematics in 2D	1
Ch 5	Force & Motion	1
Ch 6	Circular Motion & Other Applications of Newton's Law	1
Ch 7	Energy of a System	0.5
Ch 8	Conservation of Energy	0.5
Ch 9	Impulse & Momentum & Collision	1
Ch 10	Rotational Motion	0.5
Ch 11	Angular Momentum	0.5
Ch 12	Static Equilibrium	0.5
Ch 13	Universal Gravitation	1
Ch 15	Oscillatory Motion	1
Ch 16	Waves	1
Ch 17	Sound	1

**Student Learning Outcome(s):**

\*Critically examine new, previously un-encountered problems, analyzing and evaluating their constituent parts, to construct and explain a logical solution utilizing, and based upon, the fundamental laws of mechanics

\*In order to test lab skills students are expected to gain confidence in taking precise and accurate scientific measurements, with their uncertainties, and then with calculations from them, analyze their meaning as relative, in an experimental context, to the verification and support of physics theories.

**Office Hours:**

M,W 11:00 AM 01:00 PM In-Person S55
